

Mounir DABIRE

49124, Angers, France — open to remote and on-site roles across France

mounirdabire47@gmail.com | Portfolio: [Mounir DABIRE](#) | LinkedIn: [W. Mounir Ménahem DABIRE](#)

AI Engineer, AI Developer — Python, production AI agents, RAG, MCP, LLMs and Azure Cloud; available from 10 October 2026

TECHNICAL AND LANGUAGE SKILLS

Programming: Java, Python, FastAPI, APIs, SQLAlchemy, HTML5, CSS, JavaScript, TypeScript, React, Tailwind CSS.

AI: AI agents, multi-agent systems, tool calling, configuration-driven multi-bot architecture, MCP / FastMCP, RAG, embeddings, vectorisation, vector search (Azure AI Search in production, Qdrant), semantic search, Prompt Engineering, OpenAI, Claude AI, Google Gemini, Mistral AI, Hugging Face, Ollama, ElevenLabs, Deepgram.

Big Data: Data Lakehouse, Data Lake, Data Warehouse, batch and streaming pipelines, SQL (MariaDB, MySQL, Oracle, SQL Server, SQLite), NoSQL (MongoDB), CockroachDB, Parquet, Neon, Supabase, Apache Hadoop, Apache Spark, Apache Kafka, Dataiku, Power BI.

Tools: Microsoft Office, Slack, Git, PyCharm, Visual Studio Code, IntelliJ, Figma, Google Stitch, Codex, Claude Code, Antigravity, Claude Design.

DevOps & Cloud: GitHub Workflows, Azure Pipelines, CI/CD, dev/staging/production pipeline, Docker, Microsoft Azure (DevOps, Web App, AI Foundry, AI Search), Microsoft Graph, Azure AD (MSAL, Easy Auth), AWS (ECS, Lambda, S3, Bedrock), Render, LiveKit, production deployment and monitoring, versioned database migrations, unit, integration, load and end-to-end testing.

Languages: French (native), English (fluent, TOEIC 910/990), Mooré (native), German (beginner).

PROFESSIONAL EXPERIENCE

AI Developer

April 2026 - Present

ESSCA School of Management, Angers, France

- Maintain and enhance ESSCABOT, the school's AI teaching assistant, and its administration platform in production, supporting multiple courses through a shared, configurable AI engine.
- Orchestrate the RAG pipeline with Azure AI Search: course-specific indexing of institutional content from LMS platforms, vector retrieval and answers with source citations. Enable configuration-based switching between proprietary and open-source LLMs to control usage costs.
- Manage role-based access for faculty, students and staff through Microsoft Graph and Azure AD, using MSAL and Easy Auth.
- Support internal teams from requirements gathering to production deployment, and train users with no prior AI experience to use the platform independently.
- Standardise and secure Azure operations: CI/CD across development, staging and production with Azure Pipelines, monitoring, incident management, versioned database migrations and load testing.

Full-Stack AI Developer - Final-Year Project

September 2025 - February 2026

ESSCA School of Management, Angers, France

- Designed and delivered the current version of ESSCABOT to production, using a database-driven multi-bot architecture with a dedicated corpus, prompt, model and feature set for each agent.
- Built the full stack: a Python backend with FastAPI and REST APIs, an application for accessing agents, a React and TypeScript interface based on Figma designs, and real-time voice chat with LiveKit, Deepgram, ElevenLabs and an avatar.
- Deployed the platform securely on Microsoft Azure and implemented an informed-consent process allowing users to withdraw consent.

Full-Stack Developer Intern

April 2025 - July 2025

ESSCA, Angers, France

- Develop and deploy an internal RAG-based HR tool: employee information retrieved through the Microsoft Graph API, searchable in natural language without technical queries.
- Take over, update and redeploy the previous version of ESSCABOT.

PERSONAL PROJECTS

UrdWell — Long-Term Memory MCP Server for Coding Agents

June 2026

Open-source server (Apache-2.0) giving Claude Code, Claude Desktop, Codex and Gemini CLI persistent memory across sessions. LongMemEval was adopted as the evaluation protocol after a review of the field (MemGPT, Mem0, A-Mem, Zep): complementing vector search (standard cosine similarity) with BM25 and RRF fusion raises top-1 recall from 0.55 to 0.60 across 419 questions; index reuse cuts the complete evaluation run from 60 hours to 8.8 hours. A one-line installer detects each installed agent and wires it in. *Python, MCP, ONNX embeddings, Parquet, end-to-end testing.*

HindSight — Temporal Decision Accountability for AI Agents

August 2026

Open-source system (Apache-2.0) that reconstructs what was true, what an agent could know and what it actually retrieved, in order to judge whether its decision was defensible at that moment. Reference case: a telecom billing dispute caused by a late retroactive tariff, where the verdict separates a culpable error from one that was not knowable. Bi-temporal fact versions that are never overwritten, a bounded tool-calling agent loop over a single read-only tool, procedural memory kept out of the financial calculation, and a 35-scenario benchmark across seven verdict families. A full audit measured at 8.5 s on the deployed service, against 15.0 s driven from outside the cluster region. *Python, FastAPI, CockroachDB (bi-temporal, distributed vector index), AWS Bedrock, managed read-only MCP, ECS, Lambda, S3, WAF, Docker.*

EDUCATION

ESAIP, School of Engineering, France

2022 – 2026

Engineering Degree (English-taught programme) *Specialisation: Big Data*

RWU, Hochschule Ravensburg-Weingarten, Ravensburg, Germany

September 2024 – February 2025

ERASMUS Exchange Programme

KTU, Kaunas University of Technology, Kaunas, Lithuania

January 2023 – June 2023

ERASMUS Exchange Programme
